then, too near the Sun to be visible; and, during the whole month, nearer to the Sun than he is. Consequently, nothing but her superior brightness will bring her to the notice of any one. The Moon passes her on the 28th.

Mars is on the meridian at nearly half past two on the morning of the 1st, and at one on the 20th. Saturn is considerably to the west of him. The Moon passes him on

the 15th.

Jupiter is an evening star, and will at first be seen, after sun-set, near the horizon, in west-north-west; but the Sun gains upon him every day; so that he will soon be lost in the superior splendour of its beams. The Moon passes him on the 28th.

Saturn is on the meridian at nearly half an hour before one in the morning of the 1st, and at eleven minutes past eleven at night of the 19th. The Moon passes him on the

13th.

Herschell is on the meridian at three-quarters past eight in the evening of the 1st, and at twenty four minutes past seven on the 19th. The Moon passes him on the 8th.
